

For Overleaf users

In order to obtain a correct output, you have to implement the following two steps.

1. Click the “Menu” button (upper left corner) and at the “Compiler” item choose the “**XeLaTeX**” option from the drop-down menu.
2. The name of the .bib file must be **output.bib**, otherwise the .pdf file will not contain the list of references.

Before you upload your source files to our system, do not forget to rename the .bib file, since our system assumes that the name of the .tex and .bib files are the same! (E.g., Smith.tex and Smith.bib)
